Vector Institute
108 College St W1140
Toronto, ON M5G 1M1
Canada

Dear Hiring Committee,

I am excited to apply for the Machine Learning Associate position at the Vector Institute. As a Master's student in Computer Science at the University of Calgary and an incoming PhD student at the University of Waterloo, my research focuses on machine learning, algorithms, and distributed systems. I am eager to bring this expertise to the applied AI research and industry-focused initiatives at Vector.

At Johns Hopkins University, I built machine learning models to predict immune cell composition in lung cancer using high-dimensional genomic data. As a Data Engineer at AI Lida, I designed ETL pipelines and led a small team of interns, gaining hands-on experience in scaling data workflows and solving practical engineering challenges. My broader work in algorithm design has strengthened my ability to reason about efficiency and performance—skills that translate into building reliable and scalable ML systems.

I am particularly drawn to Vector's collaborative culture. A close peer of mine is currently a member of the institute, and through conversations with them I have gained a firsthand appreciation of Vector's dynamic environment and its mission to bridge world-class research with real-world impact. This perspective has only deepened my motivation to contribute to your team.

I look forward to the opportunity to bring my skills in machine learning, data systems, and applied research to the Vector Institute while continuing to grow within its community of leading researchers and practitioners. Thank you for your time and consideration.

Sincerely,

Kahbod Aeini
